

Let us show you how to implement 'Best Practices' to create a repeatable, reusable modeling environment, while using AllFusion ERwin and Model Manager's full potential.

Model Management Assessment

What is Model Management?

Model Management is the method by which data and process models are developed, maintained, used and reused within a model development lifecycle.

Assessment Objective

Our Model Management Assessment is designed to investigate and analyze your current modeling environment and deliver suggestions for improvement resulting in efficiency and cost savings. We analyze your current Model Management methods and deliver specific suggestions to streamline and improve your modeling environment.

Assessment Method

Step 1 Identify: An **Axis** consultant will work with your staff to identify how your modeling efforts are being managed, including at a minimum, discovering the answers to the following questions: Do you have standards & procedures? What do they include? Where do they reside? Is the format consistent? Who is responsible for maintaining them? Are they being enforced?

Step 2 Analyze: We will conduct a high level analysis of your modeling environment, including your strategy, and current standards and procedures documents. We assess their overall status, effectiveness and efficiency.

Step 3 Recommend: The Assessment Findings will be used to develop recommendations for how to modify existing standards & procedures, if appropriate. Additionally, we may suggest the development of materials that would enable you to create a more efficient and effective modeling environment.

Assessment Deliverables

Axis 'Findings & Recommendations' Document –
Detailing the current environment as well as offering specific ways to streamline and improve your modeling infrastructure.

Axis Prioritized Task List –
To translate into a project plan.

Axis Presentation of 'Findings & Recommendations' –
To project sponsor and/or management.

*Create a modeling infrastructure that supports
reusability and non-redundancy –*

Schedule a Model Management Assessment.

Do these problems sound familiar?

- Modeling projects are not aware of already developed model objects
Cause: Lack of re-usability
- Model inconsistency resulting in redundant and disparate information
Cause: Lack of consistent data & communication
- Incorrectly named or incorrectly defined model objects
Cause: Lack of standardization
- Confusion regarding model reviews and approvals
Cause: Lack of procedures

If you currently experience any of these problems, you're losing a significant amount of time, effort & money!

Marcie Barkin Goodwin is President and CEO of **Axis** Software Designs, Inc., a Model Management Services and Education company.

With over 15 years experience in analysis, modeling, model management administration, education and consulting, Ms. Barkin Goodwin has assisted her clients in the development of model management infrastructures across a wide variety of industries.
